SUMMER 2011 VOLUME 67/NUMBER 3

# WIESE FARMS

Cows grow fat on summer pasture. We calve in the fall and take the calves off the cow in early July. Our cows wean off heavy calves and have the capacity to do well on grass alone.

Our Junior Herd Sire **GS Bellringer**, pictured at 28 months of age and weighing 1,750 lb. He is a very correct bull and will add quality to our cowherd. We have bulls and heifers for sale from Bullringer. Come and take a look at him and his offspring.

Wiese Farms purchased their first Red Polls in 1927 and they have been a part of our lives and our farming and ranching success ever since. Red Polls have many fine qualities to contribute to the beef business.

Our hope for the future of the Association is that more people come to recognize the mothering ability, the docility, the ability to do well under adverse conditions, and the quality of the finished product for the consumer that is inherent in our Red Poll breed.

Wiese Farms encourages all breeders to register their females and bulls kept for breeding, and transfer all they sell. We support Complete Herd Reporting to advance the quality of our herd and the breed, and encourage everyone to send in all carcass information that you are able to obtain.

## Wm. Wiese & Family

Bill and Angie Wiese & Brian and Jill Hiebert

12214 E. Parallel Road, Haven, KS 67543 • (620) 465-3865 or (620) 802-2169 • e-mail: [wmhwise@speednet.net](mailto:wmhwise@speednet.net)

Our senior herd sire now retired, **SHUTER'S FLAME**, is pictured at 3 years of age. We have used him heavily the past 4 years and continue to have his offspring for sale.

Come see us for your herd sire needs. We have a nice selection of yearling bulls to choose from. They are halter broke, performance tested and fully vaccinated. We also have eight of their heifer mates for sale. We are happy to send you pictures and information by E-mail or Postal Service!

**Wayne & Sue Fish**

[www.ninewestoakcanyon.com](http://www.ninewestoakcanyon.com)

Evaluate the genetic power of our herdsires:

**OC Osage Red Boy**

**Dominator OC 705**

Semen available on both bulls

*They are ready to attend college!*

*Connors State College Bull Test, that is.*

The primary evaluative tool for our cattle is performance. The carcass and gain results from the bull test are an essential aid in predicting how

our herd's progeny will perform. The four weaning bulls pictured above, two owned by Nine West Oak Canyon and two by D&R Cattle Company, will add to the data we continually collect on our herdsires, Osage Red Boy and Dominator OC705. Below are the averages of bull test carcass data collected to date from one year old bull progeny of our two herdsires:

| SIRE          | WDA (LB) | REA/CWT | BF(IN) | IMF(%) | SC(CM) |
|---------------|----------|---------|--------|--------|--------|
| Osage Red Boy | 3.1      | 1.27    | 0.37   | 3.7    | 39     |
| Dominator     | 3.1      | 1.32    | 0.34   | 4.5    | 37     |

Keep us in mind when you're shopping for a future herdsire. When you buy one of our bulls, you'll know that you're buying proven performance.

# From The Pastures of the President

Greetings To all of you! Didn't our summer seem to just fly past us? Here we are, heading into fair time and the fall sale season, and your Association is preparing to face the challenges in front of us.

Our new office is up and functioning well. For the first time in many years, we actually have an office, complete with kitchen and a conference/storage room. I hope all of you take time to thank Brian for stepping in and taking over the duties of our Executive Secretary at a time last spring when your Association was in dire need of assistance. Since that time, he has balanced the books, created a reporting system to the Board that is easy to understand, and has processed papers on a timely basis.

Two very successful field days were held the last weekend in July featuring Red Polls in Minnesota & Ohio. The participation and the enthusiasm of our Western States group and our Blue Ridge group are models of excellence for the rest of us to follow. Along with that, the Summer National Junior Show in Shelbyville, Indiana was a huge success. Lynda & Tyocia Ziegler, along with the Burton & Spegal families raised a bunch of money and put on a great event. Thanks again to all of them.

This issue contains information about our National Sale and the plans for our Annual Membership Meeting in September. We hope to see all of you there. Please note that this year we are hosting a Friday/Saturday event with the sale on Saturday night and several seminars, along with the annual meeting, all on Saturday.

Where are we going and how will we get there? These two questions keep coming up. Are we quickly becoming a group of four regions, each functioning and needing different things? Are we needing to change "how we've always done it" to a different format as an Association? Are we becoming a "freezer beef" breed with little need of a registry association? These and other questions are going to be discussed and resolved at a "STRATEGIC PLANNING" meeting that will be held in October. We have a conference room offered to us in Indianapolis, but I would like to have one more centrally located to all breeders. If you have an idea, that is close to airports, and is reasonable, please contact me shortly. This meeting is to focus on our future, seeking positive directions for the Red Poll breed, and it needs to be a "stand-alone" event, with direction and resolution as our primary goal.

Let's have a great fall. Let's attend as many events as we can, promoting Red Polls. Let's keep those registrations and transfers coming. I'll see you in September.

As always, Mike

# How Much Meat is in a Carcass

By: Mike & Martha Parks

We recently had a Red Poll processed for sale on our son's web site. In Indiana, if the carcass is state inspected, it can be sold at retail by the piece or the package(s). Thus, we accumulated some information that I'd always wondered about but never really knew .... perhaps you've wondered, too.

The animal in question was 13 months and three days old, weighed 1,161 pounds, and hung a carcass weighing 695 pounds. When all was completed

and bones removed, we had right at 400 pounds of meat to merchandise. Thus, his dressing percentage was 60% .... close to average for a Red Poll bull of that age, but saleable product was actually 35%. We use a method of feeding that we call "grain on grass" that does not involve the use of a feedlot except in nasty Indiana weather, but does involve the use of corn and oats. The carcass was hung for 16 days, and then processed. This is what we received.

Ground beef: 13 - one pound packages  
Chuck roasts: 22  
Arm roasts: 6 (each roast was 4+ pounds)  
Rump roasts: 4  
Strip steaks: 31 (Strips & fillets were made instead of T-bones)  
Sirloin steaks: 7  
Filets: 22 (All steaks were cut 1 inch thick)  
Ribeye steaks: 19  
Swiss steaks: 6  
Flank steaks: 2

Sirloin tip steaks: 15  
Round steaks: 24  
Beef ribs: 4  
Brisket: 4

(The oxtail, heart, liver, and tongue were given away)

We sold five 42 pound boxes containing 12 pounds of steak, 8 pounds of roasts, and 22 pounds of ground beef. This was not enough ground beef, by far. Our next calf will be done with NO round steaks, NO sirloin tip steaks, NO Arm Roasts, and No flank steaks. We will also reduce the number of chuck roasts by about 50%.

When all was said and done, we netted a little over \$400 more from this calf than we would have by just selling him at the livestock auction.

I hope you find this information helpful as you decide to enter this market with your Red Polls.

## Study Shows Benefits of Beef

By: Rory Lewandowski

In January I attended a meeting for Ohio Extension Educators on the topic of grass finishing beef. One of the presentations, given by Susan Duckett from Clemson University, focused on the nutrition and palatability of pasture-finished meat. In this article I want to focus on just a piece of that presentation.

One measure of the relative healthiness of a meat product is the ratio of omega 6-to-omega 3 fatty acids. Health professionals recommend diets have a ratio of 4-to-1 or less. This recommendation is apparently based on the Lyon heart study, in which patients who had experienced a heart attack were put on a diet with an omega 6-to-omega 3 fatty acid ratio of 4-to-1. The results were a 76% decrease in mortality after two years on this diet.

### Grain vs. grass

Duckett showed a slide in her presentation that compared the omega 6-to-omega 3 ratio of various meat types. I found a couple of aspects of the slide to be interesting. The first was the result comparing grain-fed beef to grass-fed beef. The grain-fed beef had a ratio of 5-to-1 while the grass-fed beef had a ratio of 2-to-1. Certainly there have been articles, websites and health professionals who have talked about the benefits of eating grass-finished vs. grain-finished beef, and apparently with some reason.

The second thing that interested me was the ratios of the other meats on the slide. Those comparisons included: a pork chop; skinless chicken breast; skinless, natural chicken breast (I'm not sure what the "natural" in this description applies to); chicken thigh; skinless chicken thigh; farmed salmon and wild salmon.

### Other meats

As might be expected, the salmon had very low omega 6-to-omega 3 ratios. The farmed salmon was under 2-1 and the wild salmon below 1-1. What surprised me was the ratio of the other meats. The pork chop came in at just under 28-1, the skinless chicken breast at 16-1, the natural skinless chicken breast at 11-1, the chicken thigh at 24-1, and the skinless chicken thigh at 11-1. When you look at this list and the ratios, the big difference in the ratios is really between ruminant and non-ruminant animals.

My personal takeaway message from this is that sometimes the beef business generates unnecessary divisions within itself, arguing the merits and/or benefits of grass-finished vs. grain-finished beef. While it appears there are some health

# Quality Performance on Your Plate

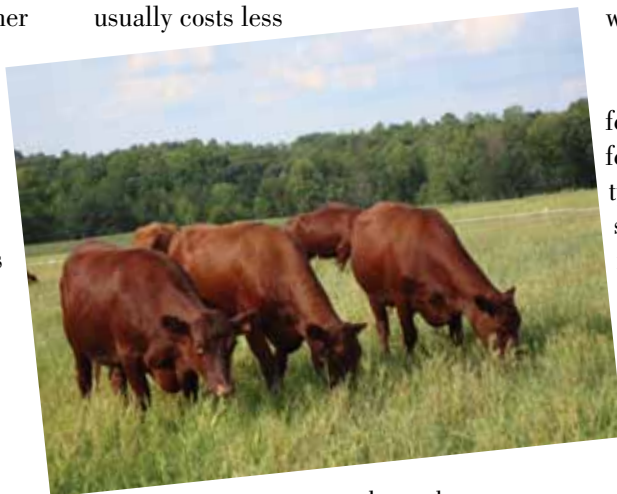

By: John W. Leimgruber III

After embarking on my Red Poll adventure just over a year ago, I quickly realized the dizzying array of confusing numbers that exist in the beef cattle industry: EPDs, birth weights, hanging weights, frame scores, shear tests, ultrasound rib-eye 'area, genetic marbling scores- the list never ends! While all these numbers are undeniably important for tracking and improving cattle performance, I think it is possible to get too caught up in all the statistics and lose sight of what often matters most to consumers: quality, price, and convenience. So I decided to test my beef where it matters most: on the dinner plate! I entered the 3rd annual PASA (Pennsylvania Association for Sustainable Agriculture) 100% Grass-Fed Beef Cook-off I where a dozen professional chefs, fine-food purveyors, and food critics sampled and rated rib-eye steaks from 14 farms representing a variety of cattle breeds all across Pennsylvania.

I understand that many cattlemen sell to the commodity beef industry, which grades and rewards for carcass quality before anybody even sees the end-product. However, a growing number of consumers are creating a market demand for locally raised beef fattened on a grain-free diet. Opportunities exist, given the right location, for beef to be marketed directly to consumers at potentially higher profit margins than conventional commodity markets. As for market volume, my experience has been that demand is increasing and currently outstrips the supply of grass-fed beef as a number of existing CSAs (Community Supported Agriculture) and restaurants in the Pittsburgh area can't seem to find a sufficient and steady supply. Despite all of these positives, I believe that it is imperative to maintain the momentum by delivering these three key attributes of quality: a great first impression with consistent product experiences, tenderness and full-flavor enough to convert a vegetarian, and a belief that

eating this beef makes you a better person. The Red Poll breed is in a great position to excel at exactly these qualities.

Firstly, with mainstream marketing historically emphasizing corn and grain-fed beef, it is vital that new potential customers have a wonderful first impression with grass-finished beef to keep them coming back for more. Hamburger currently seems to be the best "gateway-drug" to grass-fed beef because it can be easier to control by varying the grind, can be cooked more easily by customers (than steak), and usually costs less

than other cuts.

As for a consistent steak, very few if any directly marketed carcasses are ever graded, so the responsibility falls to the cattleman to select for genetic consistency in order to have confidence that every piece of meat they sell will make a great beef experience. As a pure breed, Red Poll can provide a great base for genetic consistency whether as a source of prepotent sires for a commercial herd or as a straight purebred herd.

Next, while tenderness and taste can be a very subjective experience, it seems to me that consumers of grass-fed beef expect a tender (but not mushy) mouth feel and a full nutty buttery flavor. For tenderness, it is important that your abattoir not chill the meat too rapidly after slaughter; this is to prevent the affect known as "cold shortening." The meat should also be allowed to dry-age

in the cooler for about two weeks. To develop flavor when finishing on grass, it is important to be patient and allow for the animal to mature and truly fatten before harvesting. The cattleman must account for this additional time and plan for extended grazing seasons and likely seasonally finish off of the spring or fall flush. Most entires into the grass-fed beef cook-off were harvested between 18-30 months of age; my steer was just shy of 2 years old. Here again the Red Poll has advantages due to its moderate frame size, early maturing ability, ability to fatten on grass alone, and tenderness associated with the British breeds.

Finally, many customers turn to grass-fed beef because of how it makes them feel as a consumer. Grass-fed beef is typically raised with an all natural or similar protocol in a non-confinement rotational pasture based environment. Beyond environmental impact, it has been suggested that grass-fed beef may have some health benefits over traditionally finished beef. It also allows for a direct face-to-face connection between farmer and customer bolstering local economies and building integrity into the often anonymous and highly regulated food industry. Additionally, the status of the Red Poll as a "Heritage Breed" allows for a unique marketing proposition that consumers can quickly understand and on which they place value.

That's all great, but how does that steak perform on the plate? The judges finished their first round of blind taste testing and narrowed the competition down to six finalists. After a second round of fresh sizzling steak samples, the ballots were cast and out of all 14 competitors: my Red Poll beef took home a third place ribbon! I couldn't have been more happy with the results! I really can't take much credit for the result, as I've had a lot of help getting started from PASA, the Red Poll community, and of course my grazier, Rudy D.H. Byler. Also, all of

## Continued from Page 7

the steaks that I myself sampled that day made for good eating; and just between you and me, unbeknownst to me, I even rated a few of them higher than my own steak! This level of competition tells me that producers are getting serious about delivering great grass-finished beef (especially the top two contestants representing Irish Black and Salers breeds). So even though there's no one number that can truly measure success, I'm confident that my team is off to a good start and with enough time, patience, and mistakes, we'll eventually get even better at delivering consistent quality performance onto your plate (and hopefully have a little fun doing it too!).

**Bio:** John Leimgruber lives with his wife Stephanie in a one-bedroom apartment in Pittsburgh's Northside neighborhood of Manchester. There they farm approximately 36 square feet of garden in their backyard and have one steer of a mutt dog named Linus. John purchased his foundation herd of Red Polls from Dr. Dan Schmiesing of Mardian Acres in May 2009 and contract grazes his cattle with Rudy D.H. Byler of Eastbrook Homestead near New Castle, PA. John became interested in raising grass-fed beef cattle after reading Michael Pollan's *The Omnivore's Dilemma* and watching Joel Salatin's *Polyface Farm* DVD. He decided to actually do something about it after attending the 2009 PASA 100% Grass-Fed Grass-Finished conference track where guest-speaker, Greg Judy, suggested that he should "just get started."

benefits to grass-finished, the relative difference between the two is small compared to beef vs. other livestock meats.

The beef industry should be careful not to make too big a deal out of the difference between grass-finished beef vs. grain-finished beef. The message should be that beef is a healthier choice than non-ruminant livestock meats.

# Under the Big Top Wrap Up

By: Lynda and Tyocia Ziegler

The "Big Top" is down and packed away, but it was a successful Junior Red Poll weekend in Shelbyville, Indiana, June 17-19, 2011. Thirteen juniors from two states brought 30 head of cattle for judge Corrine Kephart of Pleasureville, KY to evaluate on Father's Day; but prior to the Sunday morning show a good time was had by the juniors and junior supporters that traveled in from ten states.

Friday evening found visitors entertained by Jeff and Friends after a meal of "hoosier" ribeyes and hamburgers served by the Shelby County Cattleman's Association. Saturday started with a full day of activities and meetings. After morning chores, steers were weighed, then Joe Jackson provided a workshop on showing etiquette to about 35 juniors, adults, and local 4-Hers present. Lunchtime found the Juniors having pizza and their summer meeting in the barn, while the Indiana Red Poll Association had their summer meeting and lunch in the Family Arts building on the fairgrounds. Other visitors mingled and caught up with each other in the barn or at the hospitality room at the headquarter hotel....a few were seen having way too much fun in the indoor pool! Saturday afternoon carnival games kept the juniors and visitors entertained. The dunk tank seemed to be the most popular of the games for both adults and juniors; some of the younger ones found the duck pond to be more to their liking for water activities.

After evening chores, Red Poll enthusiasts (100) regrouped at the Knights of Columbus for a delicious meal served by Cornett's Corner Cafe and an evening of fellowship and recognition of 25 years of junior supporters. Past National Red Poll Queens Dawn Jackson Nunan (1983-IN); Jama Hough McKinney (1986-IN); Marla Richards Swartzbaugh (1987-IL); Brenda Stewart (1997-Iowa); Tyocia Ziegler (2008-IN); Megan Jackson (2009-IN) and out-going queen, Kendra

Nunan from IN were present; as were queen contest founders Jimmy and Barbara Morrison from Virginia. Jimmy and Kendra crowned the 2011 National Red Poll Queen, Bailey Aldridge of Fountaintown, Indiana. Donna Crafton Montgomery (1988, now in CO) sent a note that was shared with those present. All past queens were briefly recognized and their current status updated for those present.

Others present and recognized throughout the evening program for their various contributions to the Jr Association: Jim and Muriel McKee were recognized for their Heifer Lotto donations over the years; Bette Tomlinson Michael for being the first advisor and serving many years in that capacity; Gregg Spegal was on the original Jr board of directors; Paul Weir (92 y/o) was an ARPA board member that signed the incorporation papers for the Jr Association and traveled in from AR with his daughters and Pearl Henderson a long time junior supporter; letters were sent and shared from Merle and Leona Ebers and George and Sally Shaffer. The other ARPA board members and Jr board member/officers not present were recognized as well. Many others over the years have contributed to and support the juniors in various ways and while many were undoubtedly missed that evening all are appreciated. During the live auction, a slide show of pictures collected over the last 25 years was played for all to view. A silent auction also took place during the evening, all total the two auctions raised \$508 for the Junior Endowment Fund.

About 100 small stuffed animals were collected during the weekend to be donated to Riley Children's Hospital in Indianapolis in memory of Audry Spegal, daughter of Gregg & Kim Spegal, granddaughter of Gail and Shirley Spegal.

Sunday morning found fathers, grandfathers, uncles and juniors in the barn early preparing for the show. Despite

a rain storm moving through during the early part of the show, all things went fairly smoothly as Judge Kephart worked through the classes during the morning hours. Grand Champion Steer honors went to Kendra Nunan; Reserve to Matthew Young; Grand Champion Heifer honors went to Garrett Lowes, and again, Matthew Young took Reserve honors. Showmanship winners were: Megan Jackson- Senior; Garrett Lowes-Junior; Cameron Spegal -Beginner; and Pee Wee Jacob Shuter and Chandler Lowes. Herdsman Awards went to: Matthew Young (First Place); Adam Miller (Second Place); the Jackson/Nunan Families (Third Place). Premier Exhibitor was presented to Matthew Young by Brent Raines. Complete show results are listed elsewhere in the magazine.

Pictures of the weekend taken by Kami Ervin, photographer can be viewed at <https://picasaweb.google.com/114345694211708208935> in 4 albums labeled Red Poll; be warned you need plenty of time to view the 834 pictures of the weekend.

We want to Thank the 110 sponsors/donors that paid for or donated items for the weekend so that there was no cost to anyone that participated and the juniors got their entry money plus more back in premiums. A complete list of these sponsors and donors appear in the magazine, please let them know that we appreciate their support of our youth. Special thanks to those that helped throughout the weekend with things, you all know who you are; to Gordon Jackson for helping keep the finances in order; to the Spegal family for their help throughout the weekend and planning stages; to Donald, Jean, and Bruce Burton for help in various forms throughout the planning stage and weekend. We could not have done it without the help of many others. THANK YOU to all who attended the weekend activities for your show of support to our Juniors and the Red Poll breed's future!

# Blue Moon of Kentucky

2011 National Red Poll Meeting and Sale

I want to take this opportunity to invite everyone to the American Red Poll Association's "Blue Moon of Kentucky" National Meeting and Sale on Sept 9th and 10th, 2011. The National Meeting and Sale Committee is working very hard to present a successful and unique event for the weekend. The Central Kentucky Angus Pavilion will be the official location for most of the events that weekend. The Central Kentucky Angus Pavilion is located near Danville, Kentucky. The Hampton Inn in Danville will be the official headquarters for the weekend's festivities (859-236-6200). The headquarters hotel is only located 5.84 miles from the sale area.

Make your plans now for this special get together. A catered meal will be provided on Saturday night with Bluegrass music. Yes - we are expecting everyone to dance, stomp your feet, or do a jig. There will be tours set up to visit places of interest in and around the Danville area. Don't forget about the Annual Membership Meeting of the American Red Poll Association, one of the highlights of the weekend. There are a lot of announcements to make and business to address. All members are urged to participate. As a new way to get more breeders involved with the weekend, a promotional booth competition also has been added to the event this year. Any farm or ranch can enter a booth for a judging as to who has the best promotional display. This is also a great way to promote your farm or ranch and doesn't require you to bring animals.

As the major highlight of the weekend, we have encouraged all breeders to participate by selecting their best stock for the National Sale. Remember these cattle prices set the value of Red Poll animals for the coming year. We expect the barns to be full of good quality cattle and due to the location, we will be expecting many east coast buyers at the sale this year looking for good stock to increase their herd numbers or start new herds. The facility has stalls and penning available to handle both haltered and un-haltered animals to encourage breeders to consign animals of all ages. The committee is very pleased with the facility and feels that it will be a great site to host our annual event.

Mark your calendar and start planning for ARPA's "Blue Moon of Kentucky" National Meeting and Sale. If questions arise, you can reach me at [jdw.wilshire@gmail.com](mailto:jdw.wilshire@gmail.com) or 336-538-0888 after 8pm.

Hope to see you there!

Jeff Wilkins

*Chairman of the National Meeting and Sale*

## Don't miss the 2011 National Red Poll Show

**Friday, November 18, 2011**

North American International  
Livestock Exposition  
Louisville, Kentucky

The Open Show cattle will need to be in place from November 15th through the 18th.

Entry fees are \$80 per head and are due by October 1st. \$30 should be sent directly to the North American and the other \$50 should be sent to ARPA to help cover ARPA's portion of the premiums.

The National Red Poll Junior Show will also be held on Sunday, November 13, 2011 at the North American International Livestock Exposition. Junior Show entries are also due October 1st. Junior Show cattle will need to be in place from November 11th through the 13th.

Please take the time to support both our National Shows by exhibiting animals. We have been fortunate enough to have cattle stalled on the main aisle of the cattle barn the last few years, allowing many cattlemen from across the country to see our cattle. It is a great opportunity to showcase our great breed.

# *Blue Moon of Kentucky* **68TH NATIONAL RED POLL SALE**

**Selling 32 Top Quality Red Polls**

# 68th National Red Poll Sale

**Saturday, September 10, 2011 - 6:30 pm EST**

**Central Kentucky Angus Pavilion  
2286 Fork Church Rd, Lancaster, KY**

**Sale Day Phone: 765-425-4515**

**AUCTIONEER:** .....Dale Stith

**CLERK:** ..... Brian Shuter, ARPA Interim Exec. V.P.

**TERMS:** Terms of the sale are cash unless other arrangements are made with the individual owner before the sale. The auctioneer will settle any disputes as to bids. Each animal will be sold to the highest bidder without reservation, will be the property of the purchaser and at the purchaser's risk as soon as sold, and can be moved after settlement is made.

**REGISTRATION CERTIFICATES:** All consignments are registered in the Herd Book of the American Red Poll Association. Certificates of registration will be furnished with transfers recorded, free of extra cost to buyers.

**HEALTH PAPERS:** Cattle, except official vaccinates that are under age, will have a 30-day negative test for TB and Brucellosis, except cattle from Certified and Accredited herds. It is advisable to know your own state's health requirements on bringing cattle in from out of state. Some states require permits.

**CONSIGNOR'S RESPONSIBILITY:** The seller is the responsible party for all representations made about his cattle. The management of the sale assumes no liability, legal or otherwise, but will endeavor to protect the interest of both the buyer and seller.

**GUARANTEE:** This sale will be conducted under the Red Poll Breeding Guarantee.

**LIABILITY:** The Central Kentucky Angus Pavilion and the American Red Poll Association act as sale agents only for the consignors of this sale and assume no liability as to accidents to or by any animal. The guarantees given above are made by each consignor for his own animals which are selling.

**INSURANCE:** Insurance is highly recommended to cover from the time of purchase until the time of delivery. Insurance will be available through American Livestock Inc. Please see the clerk for your insurance needs.

**TRANSPORTATION:** The owners and sale management will make every attempt to assist buyers in hauling cattle at the lowest possible cost.

**ANNOUNCEMENTS:** Announcements made from the auction block take precedence over printed information. Any known breeding dates not listed in the catalog will be given sale day. Unless otherwise noted in the sale catalog or announced from the auction stand, each animal is sold as sound.

**MAIL BIDS:** Mail or telephone bids will be handled in a most confidential manner. If you are unable to attend the sale personally, please contact the American Red Poll Association representative, auctioneer or a breeder of your choice.

**SPECIAL REPRESENTATIVES:**

Mike Parks ..... 765-794-4610 .....ARPA President  
Jeff Doll ..... 859-384-3746 .....KY Assoc. President

# Modern Genetics for Today's Cattle Industry

*Dear Red Poll Enthusiast,*

*Welcome to the 68th National Red Poll Sale and the Annual Membership Meeting of the American Red Poll Association. Thank you for your interest in the Red Poll Breed.*

*Demand has been very high over the last few years for Red Poll genetics. The word is out about the efficient mothering ability that has been bred into the Red Poll cow. They make hardy foragers, produce an ample supply of rich milk, and are extremely docile, quiet and fertile, making them an ideal fit for both small and large*

*operations that value efficiency, performance and production within their cowherd.*

*One of the most exciting attributes of Red Poll cattle is their inherent ability to produce tender, great tasting beef, efficiently and effectively. These cattle excel at transforming forages into beef, which is gaining popularity with chefs and consumers across the country for it's natural tenderness and juiciness. Whether the calves are managed under range conditions, intensively managed rotational grazing, or even finished on grain, the customer always comes back for more tender, great tasting Red Poll beef.*

*We are excited about the consignments in this year's sale. They represent the best genetics from some of the top breeders across the country. Whether you are looking for open heifers, bred heifers, cow-calf pairs or bulls, we are sure that there will be animals*

*available in this sale that will fulfill your needs. Feel free to contact any of the consignors to find out more information about their animals.*

*Thanks again for your interest in the Red Poll breed. We look forward to visiting with you more about the animals in this sale and the Red Poll breed as a whole in Lancaster, Ky on September 9th and 10th.*

*Brian Shuter  
Interim Executive Secretary  
American Red Poll Association*

## Schedule of Activities

**All Events will take place  
at the Sale Pavilion**

### Friday - September 9th

- 3 pm - Sale Consignments in place
- 3 pm - Farm/Ranch promotional booths will be open
- 6 pm - Cookout and social gathering (open to everyone)
- 7 pm - Educational Seminars (open to everyone)
  - A. Techniques for Collecting DNA Samples for testing
  - B. Producing and Marketing Beef for Today's Consumer

### Saturday - September 10th

- 10 am - ARPA Annual Membership Meeting
- 12 pm - Free Lunch at the Pavilion (open to everyone)
- 1 pm - Educational/Sightseeing Tours (open to everyone)
  - A. Local Beef farm
  - B. Pleasant Hill Shaker Museum
- 4:30 pm - Red Poll Pre-sale Steak Dinner with Entertainment  
(This will be a sponsored meal that is free to all attendees. To assist with event planning, RSVP's are welcomed to Dan Schmiesing - 419-925-4883)

**6:30 pm - 68th National Red Poll Sale**

Jackpot is linebred Y2K. His mother is a full sister to JF Sonny Boy, the 2010 National Champion Bull that was very popular in Louisville. Jackpot has the depth, thickness, bone and muscle to work in any herd. If you like numbers, check these out. We are retaining show rights through the 2011 National Show.

Exposed to JF Sonny Boy (210784) from 11/20/10 to 3/5/11.

A nice 303 cow that has done a good job for us. One daughter was 2010 National Junior Preview Show Reserve Grand. She is due in the fall to JF Sonny Boy, the 2010 National Champion Bull. This will be one of his first calves born. She was preg checked in June and was confirmed safe 6 months.

Margie is our best JF Alex daughter to date, out of an 11 year old Marc Raymond cow. She has the depth of rib and muscle to make a great cow. Check out her numbers. These are also the qualities that can make her a great show heifer. She was the Calf Champion Heifer at the 2011 National Junior Preview Show. The girls would love to show her at the 2011 National Show if we can make it work with the buyer.

Anita's full sister was the KY Beef Expo Res. Champion in 2010 and also won her classes at the KY State Fair and NAILE. Anita has the same features of stoutness and feminine style as her sister did. Remember, we sold the 2010 National Grand Champion Heifer at the 2010 KY Beef Expo. Don't let this heifer get away. Will be bred for an April / May calf with breeding information available sale day.

Shuter's Amarillo is a moderate, thick, easy keeping bull that is sound on his feet and legs and would be ideal for a grass-based operation. His dam is from the Shari cow line from Wiese Farms and they inject performance and EPD's. His sire is our up-and coming herd sire, MB Globurg who has sired thick, structurally sound champions. Semen tested, wormed and vaccinated with Bovishield 4, VL5.

**Shuter's Madeena - Lot 27**

I can't believe we are doing this. We have not sold any females out of our foundation Rose cow family for a long, long time. They are all moderate, thick females that really work. Grass-based operations, take a look here. Madeena is moderate and thick, with good spring of rib and great eye appeal. She was Calf Champion at the 100th National Red Poll Show last fall. Exposed to Shuter's Legendary (211210), a Globurg son, from 7/1 to sale day.

Shuter's Angel is a top quality cow that is only being offered through the sale because of her later calving date and we are retaining her first daughter and two sisters. Sells with a bull calf at side (25A), born June 9, 2011, sired by Shuter's WFB Remington. Angel was a Division Champion at the 2009 National Show, just like her dam and all of her siblings that have been shown. Check out her EPD's. She's pretty good. Pasture exposed to Shuter's WFB Remington (208594) from 6/13 to sale day.

A really nice bred heifer out of MB Globurg. The Sunshine cow was a high performing female with breed leading EPD's that we flushed. You'll really like the femininity and rib shape in this cow prospect. Exposed to Shuter's WFB Remington from 6/13 to 8/20. Remington is one of the few Lazy S Aztec sons still in existence. Don't miss your opportunity to acquire his genetics for yourself.

Disco comes to you in a moderate frame with plenty of muscle and style. His third generation pedigree touches outstanding individuals from the Mohler, Wiese, MARC, Lazy S and Parks herds...he is well bred...and very predictable. His 78 pound birth weight should be very attractive to those of you with heifers to breed. His mother sells in this sale. He sells five way vaccinated and should be ready for light duty by November.

Princess is the smallest framed, heaviest structured Cisco daughter that we have raised. She has a beautiful udder and is extremely docile. She traces back on the top and bottom of her pedigree to the \$3,000, sale topping cow in Sedalia a few years ago. She last calved in October and is bred to Parkstyle Rocky (210088) to calve after the 15th of September. She will be preg checked and five way vaccinated before the sale. Cisco daughters have been and will continue to be very popular. She sells with two straws of semen from M-M The Rock.

Dolly was Martha's choice of all of the heifers that sold in the 2006 National Sale in Louisville. This Cisco daughter has been a part of our fall cow herd, and is offered only because that group is being phased out here at the farm. Her October bull calf also sells in this sale. He's living proof of her ability to produce. No cow works harder to raise a calf than Dolly. She is bred to Parkstyle Rocky (210088) to calve again after the 15th of September. She will be preg checked and five way vaccinated before the sale. She sells with two straws of semen from M-M The Rock.

Wow describes Hope. She is out of a 14 year old Mohler cow; longevity is bred in. Our neighbor showed her in 4-H, and she has a great attitude (it took a 14yr old two days to break and lead her!) Hope is medium framed, very correct footed, and should have a beautiful udder by the time she is a four year old. She sells bred to Parkstyle Rocky (210088) to calve in early October. She will be preg checked and five way vaccinated before the sale. She sells with 2 straws of semen from M-M The Rock.

# Report of the Delegates' Meeting

## 13th International Red Poll Congress in York, England

The Delegates' Meeting of the 13th International Red Poll Congress was held June 8, 2011 at the Hilton Hotel, York, England. Delegates from eight countries were in attendance. Several items were discussed and passed, including a motion to invite Panama to join the International Congress in 2014.

Regarding the next Congress, 2014 was selected as the date and Australia as the host country. The specific month and dates will be determined by the host. The offer made by the United States to host the 15th Congress in 2017 was accepted.

Two other items were presented. First, delegates were interested in promoting participation of younger breeders. The Australian hosts of the 14th Congress were asked to develop and coordinate a criteria to be used by the larger societies to identify and help sponsor younger breeders' Congress attendance.

Second, delegates from South Africa requested administrative support from the host countries to promote semen and embryo sales outside their countries. South Africa is most interested in importing both, but faces a number of administrative barriers to these sales.

Gratitude and congratulations were offered to the organizing committee and hosts in the United Kingdom for an informative and successful Congress.

Additional note: As mentioned above, the United States will host the International Congress in 2017. If you are interested in finding out more about the Congress, would like to attend the tour in Australia in 2014 or want to help plan and coordinate the 2017 Congress, please contact Dan Schmiesing or Meredith McKee.

Respectfully submitted,

Meredith McKee  
McMarshall Farms

# 13th International Red Poll Congress

United Kingdom, May 27 - June 17, 2011

“What a trip!”

For 17 days in May-June 2011, we visited eighteen Red Poll herds in the United Kingdom. From London to Lancaster, Stoke-On-Trent to Ipswich we were hosted by a variety of breeders and programs. These ranged from established herds to those started within the last few years; those with a primary focus on beef production and others maintaining the dairy characteristics of the breed.

Highlights of the trip included a day at the Suffolk Show. Suffolk was the home of the breed and special notice was taken of that fact as was the presence of the Congress participants. The entrance to the fairgrounds featured larger-than-life statues of the Suffolk Sheep, Suffolk Punch and Red Poll. Princess Ann presented the winner of the Champion Red Poll Female with an award and spent a few minutes meeting delegates.

The conference was held at York on June 8th. The focus of the day was on the evolving needs of the consumer and how Red Poll cattle fit with that evolution. The speakers challenged our thinking and promoted much conversation. Of particular interest was the role of government – involvement or intrusion – in agriculture.

Visiting the United Kingdom is a walk through a span of time most of us only read about. The immediacy of history - it is right there – is overwhelming at times. Our hosts were most gracious and endeavored to provide a tour of varied perspectives. And if anyone tries to tell you the English can't cook, please direct them to me. The food was lovely and Red Poll beef was featured prominently.

The cattle viewed at the different sites were in good condition and the owners and operators were quite willing to share their goals and progress. We had opportunities to see cattle in a number of pasture settings and were welcome to ask any number of questions regarding breeding, feeding and facility management.

As a first-time Congress participant and newly-returned to the herd, I found the tour an interesting, informative and invigorating experience. Hearing the different perspectives on Red Poll cattle and their uses around the world, seeing how others manage their facilities and herds and meeting people from all over the world who participate in raising Red Poll cattle combined to make my first – the 13th International Red Poll Congress – one to remember.

## Greetings to my Red Poll Friends

From Ken Harwell

I want to use this means to send greetings to each of you and offer my best wishes.

I have been using my retirement time to write a novel, a novel of Christian fiction. It has been my dream to do this since my college days.

My novel has been published by American Book Publishers and is scheduled for release on March 4th. In the event you are interested, you may order a copy (I'll sign each one) directly from me at:

Ken Harwell  
12802 W. 122nd Street  
Overland Park, KS 66213  
e-mail: kharwell@kc.rr.com

The cost per copy is \$10.00 plus \$3.00 for postage.

Thanks again and best wishes to you all. I rejoice with you as I keep a very close watch on the magnificent progress of the Red Poll breed!

USDA, ARS, and other federal and state agencies have been instrumental in the development of the commercial Red Poll cattle in the United States. Many breeds have come and gone, but the "Red Poll" of the industry and been called since 1880 the "Red Poll".

From their cattle breeds and other who in the event that they can produce profits for their owners, across many environments, more breeds and changing times. Check the development of the commercial Red Poll cattle in the United States. Many breeds have come and gone, but the "Red Poll" of the industry and been called since 1880 the "Red Poll".

Longhorn profitability is one of the top beef industry. Red Poll cattle have been profitable for their owners since they first arrived in the United States in 1873. For over 100 years, Red Polls have been winning and putting on America's Family Farm.

Many of today's Red Poll breeders are the third, fourth and fifth generations of their families to raise, produce, show and market Red Poll cattle. A winning testament to the profitability, consistency and longevity of the Red Poll breed.

# Contemporary Groups, Why and How?

By: Terry S. Stewart, Professor of Animal Science Purdue University

A contemporary group is a group of animals with equal opportunity to perform; all the animals within the group had an equal chance. This typically means they performed at the same time and place under the same management. It does not mean they had equal performance, just and equal chance.

The use of contemporary groups is central to performance testing programs. We use contemporary groups to minimize environmental differences impacting the performance on animals so that the observed differences in performance (phenotype) reflect the genetic differences between the animals.

The genetic model that is central to our concept of Animal Breeding and genetic evaluation is that Phenotype (P) = Genetic potential (G) + Environmental influences (E). Remember, Phenotype is what we can actually measure or observe about an animal. Its weaning weight of 534 pounds or its Red coat color, or her milk production of 42 pounds per day. The observed performance of an animal is a result of that animal's genetic ability as expressed in the production conditions (environment). We all understand that if you do not feed an animal well, it will not be able to fully express its genetic ability. What is a bit harder to predict, is that if you feed animals differently, how much of their difference in performance is because they were fed differently and how much is because of their different genetic potential? This is where contemporary groups help in genetic evaluation.

Contemporary groups are used to help minimize environmental differences in performance. The average of all animals in the group ( $\bar{P}$ ), reflects the average environmental effect on the group ( $\bar{E}$ ). So, when we express an animal's performance as a deviation from the contemporary group mean ( $P - \bar{P}$ ), we are reducing the environmental influence on the performance ( $P - \bar{P} = P - \bar{E}$  therefore,  $G + E - \bar{E} = G$ ) so phenotype (P) is more reflective of genetic potential. Since all animals within a contemporary group are treated the same, we reduce the environmental influence on performance. In a perfect contemporary group, all environmental influences would be exactly equal for all animals, so all differences in phenotype of the animals would be solely due to genetics. The animal with the best phenotype

has the best genetics.

In our genetic model ( $P = G + E$ ) we have eliminated environmental differences (E) so  $P = G$ . In the real world, contemporary groups are not perfect, and all animals are not in the same group. So rather than  $P = G$ ,  $P = G + e$ , (smaller E). The quality of contemporary groups is one of the things that contribute to Accuracy of breeding values (EPDs) in our genetic evaluations. The better job we do in making conditions within a contemporary group the same, the smaller we can make that remaining environmental effect (e). Of course Accuracy is also affected by things like number of performance records on individuals and their relatives and how many different herds the animal and assignment of mates.

So, how do we make better contemporary groups? Since contemporary groups are describing production environments, it is the breeder on the ground that needs to

make decisions of whether animals are in the same group or not. You want to group to be as large as possible so we can compare lots of animals but within that group, you want all animals to have "equal opportunity". So first recognize differences among years and herds. All animals within a contemporary group are performing in the same year in the same herd. Then within that herd and year you need to separate any other sources of environmental difference into different contemporary groups. Some obvious divisions are: Spring vs Fall Calving if you calf multiple times of the year. Perhaps location or pasture if you have your herd split among locations or pastures that may be different. Feeding differences would be another reason to separate groups if for example you creep feed some calves and not others or you use hay as a forage source to some cattle and silage to others. Any time one set of cattle is treated differently from another, you should separate them into different groups. Simply put, animals that are managed alike within the same year should be put in the same group.

How many groups you have depends on how many different ways you manage your cattle. As you make management decisions about your herd, keep in mind that bigger contemporary groups are better so when possible, manage your entire herd so that you can have as few contemporary groups within a year as possible. If you creep feed, creep feed all the calves. Feed all the cows a common ration. But, don't ignore management differences among groups and simply call them all one contemporary group just to make a bigger group. If you have calves that were not given an equal environment but included in the same contemporary group, you will be biasing the EPDs calculated from the data and ultimately reducing the accuracy of your performance system.

**In Memoriam:**

Marian Alice Grutsch, 82, died Thursday, February 3, 2011, at her home in East Jord. She was born on April 8, 1928, in East Jordan, the daughter of Claud and Alice (Hott)- Shepard. On October 1, 1947, she married Henry "Hank" Grutsch in East Jordan. They had three children and together raised Red Poll cattle for 60 years. Marian had worked at the East Jordan Cooperative for 45 years, retiring in 1991.

Marian was a 7th Degree member of the National Grange, a recipient of a 50 year Golden Sheaf by the National Grange, a 56 year member of the Peninsula Grange #706 in East Jordan and a member of the East Jordan United Methodist Church. She is survived her children, Thomas (Sally) Grutseh, Nancy Brooks, Claudia (Kent) Libbey, and son-in-law, Richard Brooks; grandchildren, Aaron (Kate) Brock, Dawn Zimmer, Rick (Celia) Brooks, Mathew (Samantrui) Libbey. MaryAlice RUHlmg, Gary Brooks & Ashley Ferguson, Nathan Libbey, MaryAnn Brooks, Seth Grutsch, Kattie (Richard) White, Shawn (Lisa) Grutsch, Rebekah Grutsch and Alexander Grutsch; sixteen great grandchildren; two sisters-in-law, Naomi Shepard and Doris Grutsch.

She was preceded in death by her husband, Henry "Hank" Grutsch on May 3, 2009; her twin brother, Robert Shepard; brothers, Ralph Shepard, S. and Don Shepard; and grandson, Patrick Libbey.

Memorial contributions may be given to East Jordan United Methodist Church, 201 Fourth. Street, East Jordan, MI 49727.

purchase of CFF Carla to start their Red Poll**

**We will have two bulls for sale in November. They are both sired  
by Dominator OC 705 and out of GS Goodfellow cows. They will  
have rate of gain data and ultrasound data for carcass quality**

# Shuter Sunset Farms

**Congratulations go out to Colton Miller, Garrett Lowes and Adam Miller  
for your successes with your Shuter bred animals this summer.**

Colton's heifer, Shuter's Sapphire, was recently named Supreme Female over  
all breeds at the Clay County 4-H Fair. She was also a Class Winner and  
Reserve Division winner at the Red Poll Junior Preview Show.

Garrett's heifer, Shuter's Daffodil, was named Grand Champion Heifer  
at the Red Poll Junior Preview Show and was the Champion  
Red Poll Heifer at the Madison County 4-H Fair.

Adam's heifer, Shuter's Gloria, was a Class Winner and  
Reserve Division winner at the Red Poll Junior Preview Show.  
He purchased Gloria in the 2010 National Sale.

All Three of these females are sired by our up and coming herd sire, M.B.  
Globurg. Globurg is a Shuter's Kalijah son out of one of Mattingly's best cows.  
Globurg has been tapped to carry on the Shuter's Tuff Enuff sire line.

## **Our consignments to the 2011 ARPA National Sale.**

- One yearling bull out of Globurg, great for a grass-based operation
- One cow-calf pair - a very good 2008 born Thunderstruck daughter bred back to Remington
- Two bred heifers out of Globurg, bred to Remington
- One open heifer calf out of Globurg
